

Remarks

The forgoing amendment has been made after a careful review of the present application, the references of record, and the Office Action May 28, 2004.

In the Office Action, the examiner rejected the claims under 35 USC 112 as failing to disclose in the specification that the parts are "fixedly," related to one another as set forth in the applicant's preceding amendment. Claims 1 and 10 were rejected under 35 USC 103 (a) as being unpatentable over Walsh in view of Chapman, and the remaining claims of the application were rejected under 35 USC 103 (a) as being unpatentable over Walsh in view of Chapman and in further view of one or more other references. Claim 2 was rejected as being unpatentable under the combination of Walsh, Chapman, and Wynn; claims 4, 7, and 12 unpatentable over the combination of Walsh, Chapman, and Sines; and claim 5 rejected under the combination of Walsh, Chapman, and Parra. Claims 6 and 11 were rejected under the combination of Walsh, Chapman, and Jones; and claims 8, 9, 13, and 14 under the combination of Walsh, Chapman, and Breeding.

In the forgoing amendment, the applicant has deleted the word "fixedly" from the claims to overcome the examiner's rejection under 35 USC 112. The amended claims do, however, refer to the vertical post 52 and the horizontal outwardly extending portion 54 as being portions of "a unitary member." With respect to any potential objection on behalf of the examiner under 35 USC 112, the applicant draws the examiner's attention to Fig. 1 in which the elongate

member which extends upwardly of the base 55 and includes the vertical post 52 and the horizontally extending portion 54 is made as a unitary member. To clarify the claims in this regard, paragraph 2 of page 6 of the specification has been amended to add the words "unitary member," to the description of the vertical post 52 and extension 54. Since these elements are clearly shown as a unitary member in Fig. 1, the addition of these words to the specification does not constitute new matter. The drawings were also amended to add indicia number "55" to Fig. 1.

As previously stated, claims 1 and 10 were amended to recite that the pedestal includes a base and a unitary member extending from the base, the unitary member having a vertically extending first portion and outwardly extending from the upper end of the first portion, a horizontally extending second portion. The applicant submits that the claims as amended are clearly supported by the specification and drawings as originally filed and are therefore not subject to renewal of the examiner's rejection under 35 USC 112.

The applicant hereby traverses the rejection of claims 1 and 10 under 35 USC 103 (a) as being unpatentable over Walsh and Chapman. Chapman was cited as disclosing a crane with a moveable arm which the examiner has cited as being equivalent to the vertical post 52 and the horizontal extension 54. The amended claims 1 and 10, however, set forth that the post and extension are portions of a unitary member which support a canopy 56 having a camera mounted therein over the gaming table 11. As explained on page 8 lines 5 through 16, if the gaming table 11 is exchanged for a table having a different

configuration, “a pedestal and canopy 56 suitable for use with the table of the second game can be substituted for that used in the first game.” The camera crane of Chapman, on the other hand, has an upwardly extending boom 44 with a plurality of hinges along its length, such that the boom 44 is clearly not a “unitary member” as required by amended claims 1 and 10. The applicant asserts that if the crane of Chapman were to be modified to provide a unitary boom, the crane as modified would be unsuited for the purposes for which it is intended, as recited in the specification of Chapman. Under in re Gordon 221 USBQ 1125 at 1127, it can’t be obvious to modify a device in a manner that renders it unsuited for its intended purpose and therefore, it is not obvious to provide the crane of Chapman with a unitary boom. The applicant also renews his arguments that the crane of Chapman does not constitute “a pedestal, as required by claims 1 and 10 and all those dependent upon them. In this regard, the applicant asserts that parking a mobile crane does not create “a pedestal” within the meaning of the word as defined in dictionaries including *Webster’s New Collegiate Dictionary*, for which the page containing the definition of “pedestal” is attached. Accordingly, Chapman cannot be combined with Walsh to reach the elements of amended claims 1 and 10. Accordingly, the rejection of amended claims 1 and 10 has now been overcome and must be withdrawn.

In similar fashion, the applicant traverses the rejection of the remaining claims, all of which are dependent upon either claim 1 or 10. Specifically, the applicant traverses the rejection of claim 2 as being unpatentable over the combination of Walsh, Chapman, and Wynn. Wynn discloses an audio

communication device, including a headset, but fails to disclose the elements deficient in Chapman with respect to claim 1 upon which claim 2 is dependent, and therefore the rejection of claim 2 should be withdrawn. Claims 4, 7, and 12 were rejected as unpatentable over the combination of Walsh, Chapman, and Sines. Sines had been cited by the examiner as disclosing a monitor, but like Wynn, Sines does not disclose the unitary vertically extending arm that is not shown in Chapman and is required by claims 1 and 10. Therefore, these claims define over the references cited.

Claim 5 was rejected under the combination of Walsh, Chapman, and Parra, Parra being cited as disclosing a telephone incorporated into a gaming table. Claims 6 and 11 were rejected under the combination of Walsh, Chapman, and Jones, with Jones being cited as disclosing a sensor and an alarm system needed for surveillance. Claims 8, 9, 13, and 14 were rejected under the combination of Walsh, Chapman, and Breeding with Breeding being cited as disclosing a caddy that provides the dealer with supplemental functions. None of the supplemental references, namely, Parra, Jones, and Breeding, disclose a support structure for a surveillance canopy having a unitary member extending from a base as required by the two independent claims. Therefore, all of the forgoing claims define over the references of record and are allowable.

In view of the forgoing, the applicant submits that the present application is now in condition for allowance, and favorable reconsideration and allowance is requested.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Robert L. Marsh", with a stylized flourish at the end.
